

Attorney Docket No. 10559-177001  
Serial No. 09/771,374  
Amendment dated July 21, 2004  
Reply to Office Action dated April 21, 2004

Amendments to the Specification:

Please replace the paragraph beginning at page 8, line 24  
with the following amended paragraph:

Four processes, each requiring access to a shared computer resource, such as a SDRAM bank are indicated as "A", "B", "C" and "D", and the access value being represented as " $\alpha$ " for each process. It is to be understood that in this illustrative example each [[f]] of the four processes, "A", "B", "C" and "D" have priority values representing "high" priority. The process is initialized such that Process A is provided access to the shared computer resource, followed by Process B, then Process C and finally Process D. In this example, the access values for Process A, B, C and D are in a proportional ratio respectively having values of 1:1:4:2. Therefore, Process A should receive a maximum of 12.5% of available bandwidth, Process B a maximum of 12.5%, Process C a maximum of 50% and Process D a maximum of 25% of available bandwidth. In the following Table, the status of the access value of each of the processes, A, B, C and D are indicated per unit interval of time, here indicated in 'clock cycles'. In the following Table, the access values for each process are represented by " $\alpha_x$ " where "x" is the process A, B, C or D. In this particular example each request for a service,

a' such as access to a shared computer resource, requires four  
clock cycles to satisfy the request.
